Shown with 24 karat gold plated arched door and cast iron surround in Majolica Green

1101 Insert - Heating 1500 sq. ft.

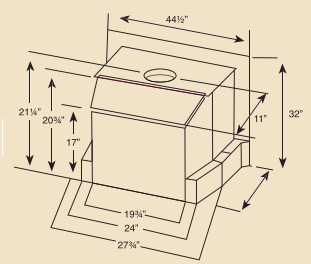

The 1101 Insert won a prestigious industry award for its unique design, which allows for flush mount or hearth mount installation in either masonry or factory built fireplaces. Featuring an elegantly designed, full view single door, standard "WHISPER QUIET" heat circulating blower & thermostatic sensor, this innovative design transforms small amounts of wood into large amounts of cozy heat. Customize your 1101 insert with an optional cast iron surround kit, available in a variety of porcelain enamel or painted finishes that will enhance your decor.

Cast Iron Surround Finishes

Standard flashing complete with brass trim

Heat Circulating Blower

When you want to extract the maximum amount of heat, an optional heat circulating variable speed blower offers increased heating efficiency. An optional sensor control automatically turns the blower on and off. (With 1101 and 1401 inserts models, WHISPER QUIET™ HEAT circulating blowers with automatic thermidisc and variable speed control are standard with the units)

Majolica Green

Napoleon's porcelain enamel cast iron surround kits are available for the 1101 and 1401 inserts. Create a distinct elegance with any of the 3 colours or painted black.

Ash Dump Pan Option

Optional for the leg models, 1100PL and 1400PI allows you to dispose of ashes quickly and easily.

Standard on pedestal models

Trivet

Available for pedestal models only.

Satin Chrome Trivet

24 Karat Gold Plated Trivet

Painted Black standard with pedestal models

Secondary Air Tube - Kiln Construction

Napoleon's secondary air tube is insulated with ceramic fiber and protected with a stainless steel cover plate, ensuring complete combustion. 100% efficient!

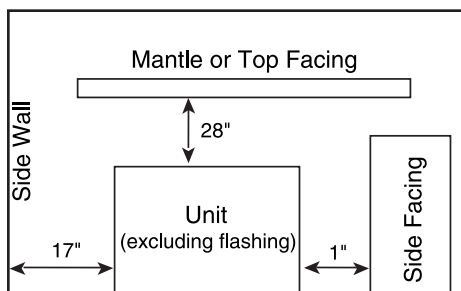

This fully lined refractory firebox acts as a kiln, concentrating the maximum amount of heat to efficiently heat your home.

Dual Vortex™ Action

To achieve an extraordinary clean burn without a catalytic combustor, horizontal jets of super heated secondary air are mixed with the fire's smoke to burn off released smoke particles. You can actually watch the spirals of secondary flames just below the ceiling during most of the burn.

Installation Clearances

A combustible floor must be protected by a non-combustible material extending 18" to the front of the unit and 8" to the side.

Measuring For An Insert
